

Earthquake prediction by Electromagnetic wave

~A presage of damaging earthquake is caught, and, in realization of gensai III~

A presage phenomenon by an earthquake and done radio wave radiation are caught and earthquake prediction is enabled. Electromagnetic wave radiation observation by an earthquake presage is caught and the magnitude of the earthquake and an area in the epicenter are predicted the signal strength from a relation of duration and data in the radiation direction. I'm trying to find a presage phenomenon with damaging earthquake more than a usual observation.
