The 2020 edition of the Space and Planetary Science Section's Dream Roadmap includes a variety of future visions, including large-scale projects such as planetary exploration missions. As a result of the efforts of many people to realize these dreams, some have already begun to move toward realization, and some have even come close to being realized. However, some have had to be reconsidered over time, and new dreams have emerged. In light of these developments, we will be revising the Space and Planetary Science Section's Dream Roadmap. We will collect new dreams and refine existing ones to create an appealing Dream Roadmap.
