Welcome Words

Jun Inoue

Chair, ISAR-8 Local
Organizing Committee

On behalf of the Symposium Organizing Committee, it is our great pleasure to welcome you to the Eighth International Symposium on Arctic Research (ISAR-8), held at Tokyo Tama Mirai Messe in Hachioji, Tokyo, Japan, on October 28 - 31, 2025. The symposium is organized by the National Institute of Polar Research (NIPR) and the Japan Consortium for Arctic Environmental Research (JCAR) with generous support from many other institutions.

Since its first meeting in 2008, ISAR has grown into one of the most important international platforms for Arctic research, bringing together scientists and stakeholders from diverse disciplines. The Arctic is experiencing rapid environmental and societal change, which affects not only the region itself but also climate, ecosystems, and human activities across the globe. At ISAR-8, we aim to share the latest findings, exchange ideas across disciplinary boundaries, and strengthen collaborations toward sustainable solutions.

This year, ISAR-8 is held entirely in person, allowing direct discussions and networking that are essential for building trust and advancing knowledge. We expect more than 300 participants from 25 countries, and around 300 presentations covering a wide range of topics from natural sciences to social sciences and humanities. We are confident that this symposium will provide a unique opportunity for fruitful discussions and new collaborations.

We sincerely thank all colleagues and partners who have made this symposium possible. We also hope you will enjoy your time at ISAR-8, and that this meeting will inspire new steps toward a deeper understanding of the Arctic and its global connections.

Yoshifumi Nogi

Professor, Director-General,
National Institute of Polar
Research, Japan

On behalf of the National Institute of Polar Research, it is my great pleasure to welcome you to the Eighth International Symposium on Arctic Research (ISAR-8), held in Hachioji City, Tokyo, at Tokyo TAMA Mirai Messe from October 28 to 31, 2025.

ISAR has traditionally taken place every two years in March; however, this time, we convene after a two-and-a-half-year interval. Following the previous symposium, ISAR-8 is once again being held in person, enabling researchers from around the world to meet face-to-face and engage in meaningful dialogue. We are delighted to host this important event in a new venue.

In recent years, the Arctic region has undergone rapid environmental changes, with far-reaching implications for global climate systems and society. Arctic research requires not only scientific investigation but also transdisciplinary collaboration across the natural sciences, social sciences, humanities, and policy studies.

At the same time, the geopolitical landscape of the Arctic, particularly involving Russia, has become increasingly complex. These developments challenge international cooperation and scientific exchange, reminding us of the critical importance of maintaining open dialogue and shared commitment to peaceful collaboration.

I sincerely hope that ISAR-8 serves as a platform for fruitful discussions, new partnerships, and fresh insights that contribute to the sustainable future of the Arctic and beyond. May your time in Hachioji be both productive and inspiring.

Thank you all for your participation and dedication.
